

PRIVATE PARKING APPEAL AUTOMATION

MASTER DEVELOPER PACK - VERSION 2 (AI-GENERATED APPEALS)

Replacement handover: AI document analysis + short adaptive questioning + controlled legal knowledge retrieval + bespoke drafting + deterministic safety/legal validation + final PDF/document.

Scope: Initial private parking appeals only. Debt recovery, Letter of Claim and County Court workflows remain separate projects.

NON-NEGOTIABLE KEEPER RULE: The system must never identify, infer or imply the driver unless the driver has already been formally identified to the operator. Customer first-person answers must be transformed into neutral keeper-safe wording.

PART 1 - What the Developer Is Building

Build an AI-assisted initial private parking PCN appeal generator. The system must read the uploaded PCN and evidence, extract and verify case facts, ask only the minimum relevant follow-up questions, identify the strongest supported factual/legal routes, retrieve approved material from the knowledge library, and generate one bespoke coherent appeal. The AI is the drafting and issue-identification layer; it is not permitted to invent facts, evidence, law, dates, admissions or driver identity.

New core model:

UPLOAD -> AI EXTRACTION -> CUSTOMER CONFIRMATION -> ADAPTIVE QUESTIONS -> AI ISSUE ANALYSIS -> APPROVED KNOWLEDGE RETRIEVAL -> BESPOKE DRAFT -> VALIDATION -> FINAL APPEAL

PART 2 - End-to-End Workflow

1. Customer selects Private Parking Appeal.
2. Customer uploads all pages of the PCN / Notice to Keeper and any available evidence.
3. AI/document extraction classifies the notice and extracts core data.
4. Customer sees a simple confirmation screen and corrects any extraction error.
5. AI determines what material facts are still missing.
6. System asks only relevant adaptive questions. Target journey: normally 3-6 factual questions after confirmation, not a long fixed questionnaire.
7. AI analyses the allegation, notice, dates, evidence and customer answers.
8. AI identifies primary and secondary appeal routes and retrieves only approved knowledge modules relevant to those routes.
9. AI drafts a single bespoke keeper-safe appeal. It may rewrite and combine approved material, but may not invent a new legal proposition.
10. A separate validation pass checks driver safety, factual accuracy, evidence references, PoFA applicability, Code applicability, contradictions and unsupported claims.
11. If validation fails, regenerate/correct or route to configured manual review rather than releasing an unsafe appeal.
12. Generate final PDF/document plus evidence list and submission guidance; save structured case data and generated output to CRM.

PART 3 - Core Data to Extract

Variable	Meaning
----------	---------

operator_name	Private parking operator
pcn_number	Parking Charge Notice reference
vrn	Vehicle registration
parking_location	Site/location
parking_event_date	Date of alleged parking event
notice_issue_date	Date notice was issued
notice_received_date	Date received, where known
notice_route	POSTAL / WINDSCREEN / UNKNOWN
entry_time / exit_time	ANPR times, where present
total_recorded_duration	Calculated site duration
charge_amount	PCN amount
alleged_breach	Operator's stated allegation
operator_ata	BPA / IPC / unknown, if determinable
case_stage	INITIAL_OPERATOR_APPEAL
evidence_inventory	Uploaded evidence types and dates

PART 4 - Adaptive Customer Questioning

Do not reproduce the old branch questionnaire as a long form. The AI should infer what it can from the notice first, then ask only questions needed to establish or rule out relevant grounds.

Route	Examples of facts the AI may need to ask
Payment / keying	Was payment made or attempted? Method? Evidence? Machine/app issue? Registration error?
ANPR / duration	Was the vehicle continuously present? More than one visit? Evidence it left? Any image/time discrepancy?
Consideration / grace	What happened before parking was accepted? Was time needed to find a bay/read terms/pay? What caused exit delay?
Permit / authorisation	Was permission held? Source? Digital/physical/visitor? Any admin/display issue? Evidence?
Breakdown / immobilisation	Did the vehicle become mechanically immobilised? When? Could it safely/lawfully be moved? Recovery/garage evidence? How long did the incident prevent departure/compliance?
Residential rights	Resident/tenant/leaseholder/visitor? Allocated or communal space? What does lease/tenancy say about parking? Does it require a permit or payment to a third-party operator? Evidence of the underlying right?
Signage	Only ask where notice/evidence or customer account raises a real signage issue.
Accessibility / Equality	Only ask when facts indicate additional time or reasonable-adjustment issues may be relevant.

The system must never ask 'Who was driving?' or invite a driver admission.

PART 5 - AI Issue-Spotting Hierarchy

The AI should identify the legal/factual character of the case before drafting. Strong primary grounds should not be diluted by generic secondary arguments.

Circumstance	Primary analysis
Keeper + driver not identified	Assess Schedule 4 PoFA compliance first; use only defects actually established.
Mechanical breakdown / involuntary immobilisation	Consider frustration/impossibility and whether the alleged contractual breach can properly arise from an event beyond control. Do not reduce this automatically to mitigation.
Resident with pre-existing parking rights	Examine lease/tenancy/parking grant first: primacy of contract, scope of parking right, allocated bay, restrictions, permit obligations, derogation from grant/quiet enjoyment where genuinely supported. Do not assume operator signage overrides the resident's underlying rights.
Payment made	Lead with payment/compliance and transaction evidence.

Short presence before acceptance	Consideration period / contract formation.
Permitted parking followed by short exit delay	Grace period / actual parking period / exit circumstances.
Multiple visits / disputed duration	ANPR sequence and actual parking duration.
Authorised visitor/customer/permit holder	Underlying authorisation and evidence.
Accessibility circumstances	Applicable Code obligations and Equality Act issues only where facts support them.

PART 6 - Breakdown / Frustration Knowledge Route

Add a dedicated BREAKDOWN_ROUTE to the knowledge base. It is a legal analysis route, not an automatic cancellation flag.

- Trigger indicators: mechanical failure, flat battery, puncture or other genuine immobilisation; recovery attendance; emergency repair; contemporaneous evidence; vehicle could not reasonably be moved or compliance/departure was prevented.
- AI must distinguish a genuine supervening event from ordinary delay, convenience or a pre-existing issue that did not actually prevent compliance.
- Drafting objective: explain that the alleged breach arose, if at all, because an unforeseen event beyond control prevented performance/departure, and require the operator to address the effect of that event rather than treating the case as a voluntary overstay.
- Evidence: recovery report, AA/RAC attendance, garage invoice, photographs, call logs/messages, breakdown-assistance records or other contemporaneous material.
- Do not state that every breakdown automatically frustrates a contract. The conclusion must follow the facts.

PART 7 - Residential Primacy / Pre-Existing Rights Route

Add a dedicated RESIDENTIAL_RIGHTS_ROUTE. The AI must analyse the source of the occupier's parking rights before relying on a generic permit argument.

- Extract/read relevant lease, tenancy agreement, parking-space grant, resident handbook or managing-agent correspondence where uploaded.
- Identify whether there is an express right to park, allocated bay, communal parking right, visitor right, permit condition, power to make regulations, variation clause or restriction.
- Where supported, consider primacy of contract/pre-existing rights: later parking-company signage does not automatically vary or extinguish rights already granted by the landowner/lessor.
- Where supported by the actual instrument and facts, consider unfettered/right-to-park wording, derogation from grant and quiet enjoyment. Do not insert these merely because the appellant is a resident.
- If the resident's agreement expressly requires compliance with a permit scheme or later regulations, the AI must address that wording rather than pretending it does not exist.
- Evidence-first drafting: quote or accurately paraphrase only the relevant uploaded clause; never invent lease terms.

PART 8 - Controlled Legal Knowledge Base

The existing approved paragraph library should be converted into structured knowledge modules. The AI may use the modules to reason and draft, rather than mechanically pasting paragraphs.

Field	Required content
module_id	Stable identifier
topic	PoFA / payment / ANPR / breakdown / residential / signage / etc.
use_when	Facts required before the module may be relied upon
do_not_use_when	Exclusions / incompatible facts
legal_basis	Verified legislation, Code provision or case principle where applicable
core_proposition	What the module is permitted to argue
evidence_needed	Evidence required or helpful
drafting_notes	Keeper-safe language and limitations
version / effective_date	For legal/Code updates and event-date applicability

The Private Parking Sector Single Code of Practice must be version-controlled. Current references should not be hard-coded forever; the system must be capable of selecting the version applicable to the parking event and operator transition position.

PART 9 - Mandatory AI Drafting Instructions

- Write as the registered keeper unless the configured case status requires otherwise.
- Never identify or infer the driver.
- Never invent facts, evidence, dates, signage, payment, lease terms, operator records or legal authorities.
- Use only grounds supported by extracted documents and confirmed answers.
- Do not use mitigation as a substitute where a substantive contractual/statutory argument is available.
- Do not claim a PoFA defect unless the applicable Schedule 4 requirement has actually been checked.
- Do not call ANPR entry-to-exit time automatically 'parking time'.
- Do not combine consideration and grace as one free allowance.
- Do not apply a universal 10-minute cancellation rule.
- Do not state that permit held, genuine customer, breakdown, resident status or disability automatically cancels a charge.
- Do not use the obsolete generic 'unlawful penalty / genuine pre-estimate of loss' argument.
- Use landowner-authority points proportionately at initial operator appeal.
- Produce a coherent letter without module IDs, internal reasoning or system instructions.

PART 10 - Validation Layer

Check	Fail condition
Driver safety	Draft identifies, strongly implies or converts keeper facts into a driver admission.
Fact grounding	Any material factual assertion is unsupported by PCN, evidence or confirmed customer answer.
Evidence integrity	Draft says evidence is enclosed when it is not uploaded/available.
PoFA	Draft alleges non-compliance without verified applicable defect.
Code	Wrong version, transition rule or provision applied to event/operator.
Residential	Draft invents or overstates lease/tenancy rights.
Breakdown	Draft states automatic frustration without facts showing genuine prevention/impossibility.
Consistency	Dates, duration, payment, authorisation or allegations contradict source documents.
Repetition	Same point repeated under multiple grounds.
Stage	Draft uses POPLA/IAS/court language at the wrong stage.

Recommended implementation: drafting model and validator should be separate passes/prompts. A failed validation should not be silently ignored.

PART 11 - Keeper-Safe Transformations

Customer may say	Do not output	Keeper-safe drafting
I paid on the app.	I paid...	A payment was made using the parking app.
I broke down and couldn't move.	I broke down...	The vehicle became mechanically immobilised and could not reasonably be moved during the relevant period.
I park there because I live there.	I live there and parked...	The vehicle was parked pursuant to the resident's pre-existing parking rights, subject to the terms of the relevant tenancy/lease.
I came back twice.	I drove back...	The vehicle attended the location on more than one separate occasion.
I didn't see the sign.	I did not see...	The relevant term was not sufficiently prominent/visible in the circumstances, where supported by the evidence.

PART 12 - Worked AI Scenarios

Example A - Breakdown

PCN alleges 47-minute overstay. Customer confirms vehicle would not start, recovery attended 35 minutes after permitted period ended, and recovery report is uploaded. AI should prioritise breakdown/frustration-impossibility analysis, accurately refer to recovery evidence, then consider grace/actual parking time only if independently relevant. It must not write a sympathy-only mitigation appeal or state that breakdown automatically voids every contract.

Example B - Resident / Allocated Bay

PCN alleges no permit displayed. Uploaded lease grants the tenant/resident a right to park in an identified space and contains no apparent permit-display term in the supplied clause. AI should lead with the pre-existing contractual parking right and analyse whether the operator's later signage/permit scheme can impose the alleged obligation. Permit-display arguments are secondary. If the uploaded lease contains a regulations/permit clause, that must be addressed rather than omitted.

Example C - Payment + Minor Keying Error

AI reads payment evidence and PCN, asks only enough to confirm the registration-entry error, then drafts around payment made, transaction matching and applicable keying-error requirements. Repeated statements that payment was made should be merged.

Example D - Keeper / Late NTK

AI calculates the relevant notice chronology, checks the applicable Schedule 4 route, and uses a keeper-liability argument only if the timing/content failure is actually established. The draft must not identify the driver.

PART 13 - Developer Build Sequence

Phase 1: PCN/evidence upload, document classification and structured extraction.

Phase 2: Customer confirmation screen.

Phase 3: Adaptive question service driven by missing facts/issues, not a fixed branch tree.

Phase 4: Structured knowledge-base storage with module versioning and admin editing.

Phase 5: AI issue-analysis/retrieval layer.

Phase 6: AI bespoke appeal drafting layer.

Phase 7: Independent deterministic/AI validation layer with hard keeper-safety rules.

Phase 8: Evidence references, PDF/document generation and CRM persistence.

Phase 9: Scenario test suite covering each major route and mixed-ground cases.

Phase 10: Admin controls for module wording, legal sources, Code versions, prompts and validation rules without application rewrites.

PART 14 - What Changes From Version 1

Version 1	Version 2
Fixed core + branch questions	AI-led adaptive questions after document extraction
Master trigger table selects paragraph IDs	AI issue analysis retrieves approved knowledge modules
Paragraph assembly + deduplication	Bespoke AI drafting grounded in approved modules
Rules engine is primary legal selector	Rules/validators act as guardrails and hard checks
Paragraph library is final wording	Library becomes controlled legal/factual knowledge source
Worked rule combinations	Scenario-based AI/validator tests

RETAIN from Version 1: scope, PCN data extraction, keeper-only policy, evidence handling, PoFA caution, consideration/grace distinction, ANPR caution, landowner proportionality, prohibition on obsolete penalty arguments, final PDF/document generation and CRM-ready structured data.

SUPERSEDE from Version 1: the Master Trigger/Decision Rule Table as the primary drafting engine, fixed branch-question implementation, paragraph-ID assembly as the final drafting method, and the old build phases requiring implementation of every trigger before generation.

PART 15 - Acceptance Criteria

- A normal customer can upload a PCN, confirm extracted facts and complete only a short relevant question journey.
- Generated appeals are bespoke and coherent rather than visibly stitched paragraphs.
- No driver identification is produced on an unidentified-driver keeper route.
- Every material assertion is traceable to uploaded/confirmed facts or an approved legal knowledge module.
- Breakdown cases are recognised as potential frustration/impossibility cases, subject to evidence and facts.
- Residential cases analyse the actual lease/tenancy/parking grant before generic permit arguments.
- PoFA and Code arguments are applied only when the applicable tests are satisfied.
- Validator blocks unsupported evidence claims, invented lease terms, contradictory dates and wrong-stage language.
- Admin can update modules, Code versions and drafting/validation instructions without rebuilding the application.

PRIVATE PARKING AI LEGAL KNOWLEDGE BASE

VERSION 1 - INITIAL OPERATOR APPEALS

Purpose: controlled retrieval source for the AI appeal generator. These records are not paragraphs to paste. The AI uses them to identify issues, ask targeted factual questions and draft a bespoke appeal from verified case facts.

NON-NEGOTIABLE: Never identify or imply the driver on an unidentified-driver keeper route. Never invent facts, evidence, lease terms, statutory defects, Code requirements, case law or operator records.

1. Knowledge Base Governance

Rule	Requirement
KB-GOV-01	Every module has a stable ID, version and effective date.
KB-GOV-02	Legislation/Code propositions must be separately maintainable from drafting language.
KB-GOV-03	The AI may combine/rewrite supported propositions, but may not create a new legal proposition outside the approved knowledge base.
KB-GOV-04	The validator must confirm every material factual assertion is grounded in the PCN, uploaded evidence or customer-confirmed answer.
KB-GOV-05	Where the legal position depends on the event date, notice route, operator/ATA or transition arrangements, the system must resolve applicability before drafting.
KB-GOV-06	Case law must not be quoted or named automatically unless the authority and proposition have been separately verified and enabled by an administrator.
KB-GOV-07	A weak secondary ground must not dilute a strong primary ground. Order: dispositive statutory/contractual issue -> strong factual issue -> evidence challenge -> secondary signage/authority point.

2. Source Register

Source	Use
Protection of Freedoms Act 2012, Schedule 4	Keeper liability only. Apply the correct notice route and statutory requirements.
Private Parking Sector Single Code of Practice, current sector version	Operational standards including consideration/grace, signage, evidence, keying/payment and other applicable requirements. Version-control by event date/transition.
Equality Act 2010	Reasonable-adjustment/additional-time analysis where disability-related facts make it relevant.
Uploaded lease / tenancy / parking grant	Primary source for residential rights. The AI must analyse the actual wording; never assume rights.
PCN / Notice to Keeper / Notice to Driver	Primary source for allegation, dates, amount, location, notice route and PoFA analysis.
Operator evidence / photographs / ANPR / payment records	Primary factual evidence. Distinguish total site presence from proven parking time.

Current implementation note (September 2026): BPA identifies the sector Single Code as version 1.1 dated 13 April 2026. The developer must store this as versioned data rather than a permanent hard-coded assumption.

3. Keeper Liability / PoFA

KB-POFA-01 - Keeper liability threshold

Field	Knowledge
USE WHEN	Registered keeper appeal; driver has not already been formally identified.
CORE PROPOSITION	Keeper liability is not automatic. If the operator seeks recovery

	from the keeper under Schedule 4, the applicable statutory conditions must be satisfied.
AI MUST CHECK	Notice route; relevant land; event date; notice dates; whether a Notice to Driver preceded the NTK; required content; whether the operator is actually relying on PoFA.
LEGAL / CODE BASIS	Protection of Freedoms Act 2012 Schedule 4.
DO NOT	Do not say the underlying charge is automatically invalid merely because keeper liability fails. State that liability cannot be transferred to the keeper under Schedule 4.

KB-POFA-02 - Postal NTK timing

Field	Knowledge
USE WHEN	Notice was first sent by post and no prior Notice to Driver was issued.
CORE PROPOSITION	Assess the statutory delivery timing applicable to a postal Notice to Keeper before alleging lateness.
AI MUST CHECK	Event date, issue date, presumed/actual delivery information, route.
LEGAL / CODE BASIS	PoFA Schedule 4 paragraph 9 route.
DO NOT	Do not allege a timing failure until the correct statutory calculation is confirmed.

KB-POFA-03 - Windscreen notice followed by NTK

Field	Knowledge
USE WHEN	A Notice to Driver was placed on the vehicle and a later NTK is relied upon.
CORE PROPOSITION	Assess the separate Schedule 4 route and timing/content requirements for a notice following a Notice to Driver.
AI MUST CHECK	Date of parking event, Notice to Driver, NTK issue/delivery.
LEGAL / CODE BASIS	PoFA Schedule 4 paragraph 8 route.

KB-POFA-04 - Mandatory notice content

Field	Knowledge
USE WHEN	A specific required Schedule 4 element appears missing or defective.
CORE PROPOSITION	Use only the precise defect established from the notice; do not generate a generic checklist challenge.
AI MUST CHECK	Vehicle, relevant land, period of parking, unpaid charge, creditor, statutory invitation/warning and other route-specific requirements.
LEGAL / CODE BASIS	PoFA Schedule 4, route-specific requirements.
DO NOT	Do not assert defects from OCR uncertainty; require document confirmation where text is unclear.

KB-POFA-05 - Driver not established

Field	Knowledge
USE WHEN	A valid PoFA failure is established and driver remains unidentified.
CORE PROPOSITION	If Schedule 4 conditions are not met and the driver has not been established, the operator cannot transfer the driver's liability to the registered keeper under Schedule 4.
AI MUST CHECK	Confirmed PoFA failure + driver identified = NO.
DO NOT	Never invite or infer driver identity.

4. Consideration, Grace and Actual Parking Time

KB-CON-01 - Consideration period

Field	Knowledge
USE WHEN	Vehicle entered controlled land and time was needed before any parking terms could reasonably be accepted.
CORE PROPOSITION	Entry onto land is not automatically acceptance of parking terms.

	Consider time reasonably required to find a space, locate/read terms, decide whether to stay and attempt initial compliance.
AI MUST CHECK	ANPR times; site layout; reason for initial period; whether parking actually took place; whether terms were rejected and vehicle left.
LEGAL / CODE BASIS	Applicable Private Parking Sector Single Code provisions in force for the event.
DO NOT	Do not merge consideration time with an end-of-parking grace period.

KB-CON-02 - Terms rejected / vehicle left

Field	Knowledge
USE WHEN	Terms were considered but not accepted and the vehicle then left.
CORE PROPOSITION	Analyse whether a parking contract was ever accepted rather than treating all site presence as parking.
AI MUST CHECK	Duration; activity; evidence; whether any conduct clearly accepted the terms.

KB-GRACE-01 - End grace period

Field	Knowledge
USE WHEN	A permitted/paid parking period ended and the allegation concerns additional time before exit.
CORE PROPOSITION	Apply the applicable end-of-parking grace requirement only after establishing that it applies to the site/event.
AI MUST CHECK	Parking end time; ANPR exit; applicable Code rule; event date; operator transition status.
LEGAL / CODE BASIS	Applicable Private Parking Sector Single Code.
DO NOT	Do not hard-code '10 minutes always cancels'.

KB-GRACE-02 - Exit congestion / barrier delay

Field	Knowledge
USE WHEN	Departure was delayed by queueing, congestion, barrier failure or site-management conditions.
CORE PROPOSITION	An exit-camera timestamp may include non-parking time caused by the process of leaving the site.
AI MUST CHECK	Cause and duration of delay; site evidence; barrier/queue information; actual parking end time.

KB-TIME-01 - ANPR presence is not necessarily parking time

Field	Knowledge
USE WHEN	Operator relies on entry and exit cameras to calculate duration.
CORE PROPOSITION	Distinguish total presence on controlled land from the period actually parked.
AI MUST CHECK	Entry/exit location, manoeuvring, finding a bay, payment activity, queueing, multiple visits.

5. Payment, Keying and Systems

KB-PAY-01 - Payment made

Field	Knowledge
USE WHEN	Evidence or confirmed facts show a tariff/payment was made.
CORE PROPOSITION	Lead with payment and require the operator to reconcile its transaction records with the parking event.
AI MUST CHECK	Payment method, time, amount, location, VRM entered, receipt/bank/app evidence.
EVIDENCE	Receipt, app confirmation, bank transaction, payment screenshot.

KB-PAY-02 - Machine failure

Field	Knowledge
USE WHEN	A genuine attempt to pay was prevented by a machine fault.
CORE PROPOSITION	Analyse the operator-provided payment mechanism and the genuine attempt to comply; request relevant fault/maintenance/transaction records where appropriate.
AI MUST CHECK	Machine ID/location, attempt time, alternative methods, evidence of fault.
EVIDENCE	Photo/video, error message, witness evidence, transaction attempt.

KB-PAY-03 - App / digital payment failure

Field	Knowledge
USE WHEN	Operator requires or offers digital payment and the process failed.
CORE PROPOSITION	Consider whether a genuine attempt to comply was prevented by the provided system and whether alternative payment was realistically available.
AI MUST CHECK	App/system, time, error, connectivity, alternative methods, records.
EVIDENCE	Screenshots, app history, bank authorisation, support messages.

KB-KEY-01 - Minor keying error

Field	Knowledge
USE WHEN	Payment made but VRM entry contains a minor error.
CORE PROPOSITION	Treat as a paid parking event with a registration mismatch and apply the applicable Code/keying-error requirements.
AI MUST CHECK	Correct VRM, entered VRM, payment match, error type.
LEGAL / CODE BASIS	Applicable sector Code provisions on keying/payment errors.

KB-KEY-02 - Different vehicle registration entered

Field	Knowledge
USE WHEN	Payment was made but another known vehicle registration was entered.
CORE PROPOSITION	Require transaction matching and analyse applicable Code treatment; do not describe the event as simply unpaid parking where tariff was paid.
AI MUST CHECK	Entered VRM, relationship to keeper/customer, payment record.

6. ANPR and Evidence Integrity

KB-ANPR-01 - Multiple visits / double visit

Field	Knowledge
USE WHEN	Vehicle attended the site more than once and operator may have paired first entry with final exit.
CORE PROPOSITION	Require review of the complete ANPR sequence rather than two selected images.
AI MUST CHECK	All visits; intermediate captures; evidence vehicle was elsewhere.
EVIDENCE	Dashcam, receipts, location records supplied by customer, CCTV, witness evidence.

KB-ANPR-02 - Missing capture / incorrect pairing

Field	Knowledge
USE WHEN	Sequence appears incomplete or inconsistent.
CORE PROPOSITION	An absent intermediate capture does not prove continuous presence; the operator should verify the full record and pairing logic.
AI MUST CHECK	Image sequence, timestamps, camera lanes, complete logs if disclosed.

KB-ANPR-03 - Timestamp / VRM discrepancy

Field	Knowledge
USE WHEN	Image, registration read or timestamp appears inconsistent.
CORE PROPOSITION	Challenge only the identified discrepancy and request verification of the evidence relied upon.
AI MUST CHECK	Original images, timestamp, OCR/VRM read, system records.
DO NOT	Do not make generic calibration allegations with no factual trigger.

KB-EV-01 - Independent evidence contradicts allegation

Field	Knowledge
USE WHEN	Uploaded evidence conflicts with operator's duration/location/account.
CORE PROPOSITION	Give the independent evidence appropriate weight and require the operator to reconcile the contradiction.
AI MUST CHECK	Authenticity, timestamp, location and relevance of evidence.

7. Signage and Contract Formation

KB-SIGN-01 - Entrance signage

Field	Knowledge
USE WHEN	Credible facts/evidence indicate parking terms were not adequately communicated on entry.
CORE PROPOSITION	Assess whether relevant terms were reasonably brought to attention before/at contract formation.
AI MUST CHECK	Entrance route, sign position, visibility, event lighting, contemporaneous images.
EVIDENCE	Customer photographs/video; operator site plan/signage evidence.

KB-SIGN-02 - Charge / relevant term prominence

Field	Knowledge
USE WHEN	The specific restriction or parking charge was not prominent/clear.
CORE PROPOSITION	Focus on the precise term allegedly breached and whether it was adequately communicated.
AI MUST CHECK	Sign wording, font/prominence, placement, allegation, lighting.

KB-SIGN-03 - Conflicting signage

Field	Knowledge
USE WHEN	Different signs communicate inconsistent terms.
CORE PROPOSITION	Identify the conflict and require the operator to explain which terms applied and how they were communicated.
AI MUST CHECK	Photos of each sign; site position; wording.

KB-SIGN-04 - Contemporaneous signage proof

Field	Knowledge
USE WHEN	Operator relies on generic/undated signage evidence or customer evidence suggests change/damage.
CORE PROPOSITION	Require evidence of signage actually in place at the material time where this is genuinely disputed.
AI MUST CHECK	Event date; operator photos; installation/change records if available.

8. Authorisation, Permits and Genuine Use

KB-AUTH-01 - Underlying authorisation

Field	Knowledge
USE WHEN	Vehicle had permission from resident, employer, hotel, business, landholder or other authorised source.
CORE PROPOSITION	Analyse the underlying permission before treating an admin/display mismatch as absence of authority.
AI MUST CHECK	Source, scope, date/time, vehicle registration, evidence.

KB-AUTH-02 - Permit held / digital permit

Field	Knowledge
USE WHEN	A valid permit or whitelist entitlement existed.
CORE PROPOSITION	Require operator to check physical/digital permit and whitelist records; distinguish entitlement from display/registration administration.
AI MUST CHECK	Permit number, validity, bay/site, VRM, digital record.

KB-AUTH-03 - Visitor authorisation

Field	Knowledge
USE WHEN	Vehicle was an authorised visitor.
CORE PROPOSITION	Analyse visitor permission and any registration process; do not assume a registration error extinguished underlying permission.
AI MUST CHECK	Host/resident confirmation, visitor system, dates, evidence.

KB-CUST-01 - Genuine customer

Field	Knowledge
USE WHEN	Site is customer-only and evidence shows genuine use of premises.
CORE PROPOSITION	Use as a factual/authorisation route where relevant, not as an automatic cancellation rule.
AI MUST CHECK	Receipt/booking, premises, timing, landowner/occupier policy.

9. Breakdown / Frustration / Involuntary Immobilisation

KB-BREAK-01 - Mechanical breakdown

Field	Knowledge
USE WHEN	A genuine mechanical event prevented the vehicle from being moved or prevented timely compliance/departure.
CORE PROPOSITION	Consider whether an unforeseen supervening event outside the relevant party's control made contractual performance/departure impossible or materially prevented it. Frame as a substantive contractual issue where facts support it, not merely a plea for discretion.
AI MUST CHECK	Nature of fault; when it arose; whether vehicle could safely/reasonably be moved; recovery/repair steps; duration; whether the alleged breach was caused by the breakdown.
LEGAL / CODE BASIS	Common-law frustration/impossibility principles; application is fact-sensitive and must not be presented as automatic.
EVIDENCE	AA/RAC/recovery report, garage invoice, roadside repair record, photographs, call logs/messages, contemporaneous assistance records.
DO NOT	Do not state 'breakdown = automatic frustration'. Do not invent the fault or recovery attendance.

KB-BREAK-02 - Puncture / battery / immobilisation

Field	Knowledge
-------	-----------

USE WHEN	A puncture, flat battery or similar event actually immobilised the vehicle.
CORE PROPOSITION	Treat as breakdown only where evidence/facts show the vehicle could not reasonably depart or comply; otherwise assess as ordinary delay.
AI MUST CHECK	Severity, safety, repair/recovery, time.

KB-BREAK-03 - Recovery vehicle / assistance time

Field	Knowledge
USE WHEN	Vehicle remained while awaiting legitimate roadside recovery/assistance.
CORE PROPOSITION	Separate time caused by necessary recovery arrangements from voluntary parking and require operator to address the documented incident.
AI MUST CHECK	Call time, arrival time, departure/recovery time, recovery evidence.

10. Residential Parking / Primacy of Contract

KB-RES-01 - Primacy of pre-existing parking rights

Field	Knowledge
USE WHEN	Resident/tenant/leaseholder relies on an uploaded agreement granting parking rights.
CORE PROPOSITION	The actual lease/tenancy/parking grant is the starting point. Later operator signage should not automatically be assumed to vary or extinguish pre-existing contractual/property rights.
AI MUST CHECK	Exact parking clause; allocated/communal bay; permit wording; power to make regulations; variation mechanism; parties; commencement date.
EVIDENCE	Lease, tenancy, parking-space grant, title/plan, managing-agent correspondence.
DO NOT	Do not assert primacy merely because the appellant is a resident.

KB-RES-02 - Unfettered right to park

Field	Knowledge
USE WHEN	Uploaded instrument grants a parking right without the restriction now alleged.
CORE PROPOSITION	Where the wording genuinely grants an unrestricted/unfettered right, analyse whether a later permit/payment condition is inconsistent with that grant.
AI MUST CHECK	Exact clause and any qualifications/regulations.
DO NOT	Never use the word 'unfettered' unless the document supports it.

KB-RES-03 - Allocated bay

Field	Knowledge
USE WHEN	Agreement identifies a specific bay/space or exclusive parking entitlement.
CORE PROPOSITION	Analyse the resident's rights in that bay and whether the operator has authority to impose the alleged additional contractual term.
AI MUST CHECK	Plan/bay number, lease clause, permit requirements, management powers.

KB-RES-04 - Derogation from grant

Field	Knowledge
USE WHEN	Landlord/lessor granted a parking right and later arrangements arguably substantially interfere with the benefit granted.
CORE PROPOSITION	Consider derogation from grant only where the actual grant and later interference support the doctrine.
AI MUST CHECK	Nature of grant; later scheme; degree of interference; contractual powers.

DO NOT	Do not use as boilerplate in every residential appeal.
--------	--

KB-RES-05 - Quiet enjoyment

Field	Knowledge
USE WHEN	Tenancy/lease rights and enforcement conduct raise a genuine interference issue.
CORE PROPOSITION	Use only where the contractual wording/facts support a quiet-enjoyment point; it is not a universal answer to a PCN.
AI MUST CHECK	Agreement terms; conduct; repeated interference if relevant.
DO NOT	Do not treat quiet enjoyment as meaning freedom from all parking regulation.

KB-RES-06 - Permit scheme expressly incorporated

Field	Knowledge
USE WHEN	Lease/tenancy contains a permit requirement, regulations clause or power to introduce parking controls.
CORE PROPOSITION	The AI must confront the clause and analyse its scope rather than omitting it. Primacy may be weaker or differently framed.
AI MUST CHECK	Exact clause; whether regulations were validly made; notice/variation process; allegation.

KB-RES-07 - Managing agent / operator authority

Field	Knowledge
USE WHEN	Resident rights exist and third-party operator enforcement is challenged.
CORE PROPOSITION	Assess whether the managing agent/landowner could grant enforcement rights consistent with the resident's existing agreement.
AI MUST CHECK	Lease powers; management agreement if available; site boundary; operator authority.

11. Equality Act / Additional Time

KB-EQ-01 - Reasonable adjustments

Field	Knowledge
USE WHEN	Facts indicate disability-related needs may have affected use of the parking service or time required.
CORE PROPOSITION	Consider whether reasonable adjustments/additional time were required and whether the operator properly considered the individual circumstances.
AI MUST CHECK	Relevant functional impact, extra time needed, operator knowledge where relevant, evidence supplied.
LEGAL / CODE BASIS	Equality Act 2010; apply only where statutory conditions are met.
DO NOT	Do not require the customer to disclose unnecessary medical detail. Do not equate Blue Badge possession with the legal test.

KB-EQ-02 - Additional time

Field	Knowledge
USE WHEN	Disability-related circumstances reasonably required more time to enter, park, pay, return or leave.
CORE PROPOSITION	Do not assess the event solely by automated timestamps where additional time may constitute a reasonable adjustment.
AI MUST CHECK	Why extra time was needed and how it relates to the alleged breach.

KB-EQ-03 - Hidden disability

Field	Knowledge
-------	-----------

USE WHEN	No visible badge/indicator but disability-related facts are relevant.
CORE PROPOSITION	Absence of visible evidence does not itself resolve whether Equality Act duties were engaged.
AI MUST CHECK	Facts and evidence volunteered/necessary for the issue.

12. Hospital / Medical Sites

KB-HOSP-01 - Hospital attendance

Field	Knowledge
USE WHEN	Parking event connected with hospital/medical attendance.
CORE PROPOSITION	Analyse the site's parking terms, exemptions/validation process, appointment/emergency circumstances and any relevant additional-time obligations.
AI MUST CHECK	Hospital, appointment/emergency, validation/payment process, evidence.

KB-HOSP-02 - Emergency treatment / unpredictable delay

Field	Knowledge
USE WHEN	Emergency or clinical delay caused timing/parking issue.
CORE PROPOSITION	Treat the factual cause seriously and assess contractual/Code/adjustment issues rather than using generic sympathy wording.
AI MUST CHECK	Attendance records, appointment/clinical delay evidence where available.
DO NOT	Do not invent medical facts or request excessive health information.

KB-HOSP-03 - PALS / Trust cancellation route

Field	Knowledge
USE WHEN	NHS/healthcare landholder has a cancellation or exemption mechanism.
CORE PROPOSITION	Where appropriate, flag landholder/PALS cancellation as a parallel practical route while still generating the operator appeal.
AI MUST CHECK	Trust/site policy and evidence.

13. Loading, Drop-off, Collection and Non-Parking Activity

KB-ACT-01 - Loading / unloading

Field	Knowledge
USE WHEN	Vehicle presence was genuinely for loading/unloading and the allegation/site terms make this legally/factually relevant.
CORE PROPOSITION	Distinguish the activity from ordinary parking where the contract/site rights recognise the distinction; analyse actual terms and evidence.
AI MUST CHECK	Nature/duration of loading, goods, site terms, evidence.
DO NOT	Do not assume loading is always exempt on private land.

KB-ACT-02 - Passenger drop-off / pick-up

Field	Knowledge
USE WHEN	Vehicle stopped briefly for genuine drop-off/collection.
CORE PROPOSITION	Analyse the precise site restriction and whether stopping/parking/contract formation is established; do not assume a universal exemption.
AI MUST CHECK	Duration, location, signage, activity.

KB-ACT-03 - Hotel / restaurant / collection delay

Field	Knowledge
USE WHEN	Authorised customer use involved a collection/check-in/waiting process.
CORE PROPOSITION	Use the underlying authorisation and factual delay where relevant; do not convert ordinary waiting into an automatic exemption.
AI MUST CHECK	Booking/order/receipt, authorisation, timing.

14. EV Charging and Site Infrastructure

KB-EVCH-01 - EV charging

Field	Knowledge
USE WHEN	Vehicle remained for genuine charging and allegation relates to duration/payment/authorisation.
CORE PROPOSITION	Analyse charging terms separately from ordinary parking terms and establish whether the charge concerned parking, charging, overstay or tariff.
AI MUST CHECK	Charge session, app/charger record, bay terms, parking terms.

KB-INFRA-01 - Barrier / access system failure

Field	Knowledge
USE WHEN	Entry/exit or compliance was prevented/delayed by site infrastructure.
CORE PROPOSITION	Time caused by operator/landholder infrastructure should be distinguished from voluntary parking where supported.
AI MUST CHECK	Barrier/access fault, queue, timestamps, evidence.

15. Landowner Authority

KB-LAND-01 - Authority to operate

Field	Knowledge
USE WHEN	A proportionate authority challenge is relevant.
CORE PROPOSITION	Require evidence that the operator had sufficient authority to operate/enforce at the specific site and material date.
AI MUST CHECK	Site, event date, contracting party, scope.
DO NOT	At initial appeal do not falsely assert that no authority exists merely because the customer has not seen the contract.

KB-LAND-02 - Scope / site boundary / material date

Field	Knowledge
USE WHEN	Evidence suggests location, date or scope mismatch.
CORE PROPOSITION	Focus on the specific mismatch: land boundary, term, expiry, cancellation powers or enforcement scope.
AI MUST CHECK	Contract/authority evidence if supplied; site plan; dates.

KB-LAND-03 - Redacted authority evidence

Field	Knowledge
USE WHEN	Operator later provides authority evidence but redactions prevent material verification.
CORE PROPOSITION	Challenge only redactions that prevent verification of parties, land, duration or enforcement scope.
AI MUST CHECK	Document supplied and visible omissions.

16. Drafting Priority and Suppression Rules

Priority	Instruction
1	Lead with a confirmed dispositive keeper-liability or contractual-rights point.
2	Then strongest fact-specific ground: payment, breakdown, residential right, multiple visits, authorisation, etc.
3	Then relevant Code/evidence/signage issues.
4	Landowner authority normally concise at initial operator stage unless specific evidence creates a stronger issue.
5	Do not stack every possible ground. Omit weak, contradictory or unsupported modules.
6	Deduplicate facts and requests. The final appeal should read as one case-specific letter.
7	Never expose module IDs or internal confidence/reasoning to the customer/operator.

17. Mandatory Validator Rules

Validator	Block release if...
VAL-DRIVER	Draft identifies or strongly implies who drove where driver remains unidentified.
VAL-FACT	A material fact cannot be traced to source document/evidence/confirmed answer.
VAL-EVIDENCE	Draft says evidence is enclosed when it is not available.
VAL-POFA	A PoFA defect is alleged without route-specific verification.
VAL-CODE	A Code rule/version is applied without event-date/operator applicability check.
VAL-RES	Lease/tenancy wording is invented, paraphrased inaccurately or rights are overstated.
VAL-BREAK	Breakdown is described as automatic frustration without evidence/facts supporting prevention of performance/departure.
VAL-EQ	Equality Act ground is generated without relevant facts.
VAL-ANPR	Generic calibration/maintenance allegation is inserted without a factual trigger.
VAL-STAGE	POPLA/IAS/court language appears in an initial operator appeal except configured next-step wording.
VAL-CONFLICT	Draft contains contradictory dates, payment status, duration, permit status or account.

18. Developer Retrieval Output Schema

Recommended internal retrieval output before drafting:

Field	Example
primary_route	RESIDENTIAL_RIGHTS
secondary_routes	SIGNAGE; LANDOWNER_AUTHORITY
module_ids	KB-RES-01; KB-RES-03; KB-LAND-01
verified_facts	Structured source-backed facts only
missing_facts	Questions still required before drafting
evidence_refs	Uploaded evidence identifiers
prohibited_claims	Unsupported grounds/claims to exclude
code_version	Applicable sector Code version/status
pofa_route	POSTAL / WINDSCREEN / NOT_APPLICABLE / UNRESOLVED
driver_status	UNIDENTIFIED / FORMALLY_IDENTIFIED

19. Administration / Update Policy

The knowledge base must be editable independently of application code. Each module should have version, effective_from, effective_to, status (ACTIVE/REVIEW/DISABLED), source reference, last legal review date and change notes. When legislation, the sector Code or appeal practice changes, administrators should be able to disable or replace a module without a developer deployment.

APPENDIX A - Approved Drafting Building Blocks

These are controlled drafting building blocks inherited from the original developer pack and expanded for the AI build. They are not to be concatenated mechanically. The AI may paraphrase, merge and reorder them only where the underlying module has been retrieved and its factual/legal prerequisites are satisfied.

PP-INTRO-001 - Registered Keeper Appeal

I write as the registered keeper of vehicle {{vrm}} in respect of Parking Charge Notice {{pcn_number}}. I dispute liability for this parking charge and require the operator to consider this appeal on the grounds set out below.

PP-INTRO-002 - Driver Not Identified

This appeal is submitted by the registered keeper. No admission is made as to the identity of the driver, and nothing contained within this appeal should be interpreted as identifying or inferring the identity of the driver.

PP-POFA-001 - Keeper Liability Must Be Established

Where the operator seeks to recover the parking charge from the registered keeper rather than the driver, it must establish that the statutory conditions for keeper liability under Schedule 4 of the Protection of Freedoms Act 2012 have been satisfied. Keeper liability does not arise merely because an individual is the registered keeper.

PP-POFA-002 - No Notice to Keeper Received

The registered keeper has not received a Notice to Keeper capable of establishing keeper liability under Schedule 4. In the absence of compliance with the statutory procedure required to transfer liability, the operator has not established a right to recover this charge from the registered keeper under Schedule 4.

PP-POFA-003 - Postal NTK Timing Failure

The Notice to Keeper was not delivered within the applicable statutory period for the relevant postal-notice route. The operator has therefore failed to satisfy a condition required to transfer liability to the registered keeper under Schedule 4.

PP-POFA-004 - NTK Following Notice to Driver - Timing

Where a Notice to Driver preceded the Notice to Keeper, the subsequent notice must comply with the separate timing requirements applicable to that route. The notice in this case did not meet the applicable statutory timing requirement and keeper liability has not been established.

PP-POFA-005A - Vehicle / Relevant Land / Period of Parking

The Notice to Keeper fails to provide the route-specific information required by Schedule 4 concerning the alleged parking event. The precise defect identified by the system should be stated here; this block must never be used from OCR uncertainty alone.

PP-POFA-005B - Keeper Warning Defect

The Notice to Keeper does not contain a compliant route-specific keeper-liability warning. The operator cannot rely upon Schedule 4 where the applicable statutory conditions have not been met.

PP-POFA-005C - Creditor Identification Defect

The notice does not comply with the applicable requirement concerning identification of the creditor. If the operator relies on Schedule 4, it must establish compliance with the route-specific statutory requirements.

PP-POFA-005D - Unpaid Charge / Amount Defect

The notice does not properly comply with the applicable Schedule 4 requirement concerning the unpaid parking charge said to be outstanding. This point may be used only after the exact statutory defect is verified.

PP-POFA-005E - Statutory Invitation Defect

The notice does not contain the applicable statutory invitation required by the relevant Schedule 4 route. The system must identify the exact missing/defective requirement before using this point.

PP-POFA-006 - Driver Not Established + PoFA Failure

The operator has not established the identity of the driver. As the applicable Schedule 4 requirements have also not been satisfied, liability cannot be transferred to the registered keeper under Schedule 4.

PP-POFA-007 - Keeper Conclusion

For the verified reasons set out above, the operator has not established keeper liability under Schedule 4 of the Protection of Freedoms Act 2012. The charge should therefore be cancelled as against the registered keeper.

PP-PAY-001 - Parking Was Paid For

The allegation that the applicable parking tariff was not paid is disputed. A payment was made in connection with the vehicle's use of the site. The operator should review its payment records against the parking event before continuing enforcement.

PP-PAY-002 - Payment Evidence

Evidence confirming payment is supplied with this appeal. It should be considered alongside the operator's transaction records and the details of the alleged parking event.

PP-PAY-003 - Machine Failure

A genuine attempt was made to comply with the payment arrangements, but the payment machine did not operate as expected. The operator should review its machine fault, maintenance and transaction records for the relevant time.

PP-PAY-004 - App / Digital Failure

A genuine attempt was made to use the digital payment facility provided for the location, but the transaction could not be completed because of the identified system problem. The operator should review its relevant system and transaction records.

PP-PAY-005 - Genuine Attempt to Pay

The circumstances demonstrate a genuine attempt to comply with the payment requirements. The charge should not be considered in isolation from the steps taken to make payment and the verified reason the transaction could not be completed.

PP-PAY-006 - Payment Record Search

The operator is requested to conduct a reasonable search of its payment records for the relevant location and period, including transactions capable of being matched to the parking event rather than relying solely on an immediate VRM match.

PP-KEY-001 - Paid but VRM Entered Incorrectly

A parking payment was made, but an error occurred when the vehicle registration details were entered. The operator should identify the corresponding transaction and apply the current applicable Code/Appeals Charter treatment.

PP-KEY-002 - Minor Keying Error

The discrepancy concerns a minor registration-entry error. Payment was nevertheless made. The operator should match the transaction and deal with the case in accordance with the applicable current keying-error requirements.

PP-KEY-003 - Different Vehicle Registration Entered

Payment was made but registration details relating to another vehicle were entered. The operator should examine the relevant transaction and apply the applicable current Code treatment.

PP-KEY-004 - Tariff Paid

Notwithstanding the registration-entry error, the applicable tariff was paid. The case should not be treated as though the parking facility was used without payment.

PP-CON-001 - Consideration Period

The vehicle's recorded presence must be considered in the context of the applicable consideration period. Entry onto controlled land does not, without more, establish immediate acceptance of every parking term or that the entire entry-to-exit interval was a period of parking.

PP-CON-002 - Locate / Read Terms

Time was required to locate and consider the applicable parking terms before a decision could reasonably be made whether to accept them.

PP-CON-003 - Terms Rejected and Vehicle Left

Having considered the terms, they were not accepted and the vehicle left. The initial presence should not automatically be treated as an accepted parking contract.

PP-CON-004 - Initial Payment Attempt

Part of the recorded period was spent attempting to understand and comply with the payment arrangements. The operator should not automatically treat the camera entry time as the commencement of paid parking.

PP-CON-005 - Finding a Space

Part of the recorded presence was spent entering, manoeuvring and attempting to locate a suitable space. Camera entry time is not automatically the start of actual parking.

PP-GRACE-001 - Applicable Grace

The applicable current Code requirements provide for a grace period in relevant circumstances in addition to the parking period. The operator must assess the alleged additional time against the rule actually applicable to this event.

PP-GRACE-002 - Return to Vehicle / Leave

The period following the permitted parking session included time reasonably required to return to the vehicle, prepare to leave and exit the controlled land.

PP-GRACE-003 - Exit Congestion

The vehicle's departure was affected by verified congestion or delay in exiting. An ANPR exit timestamp records passage at the camera and does not necessarily establish that the vehicle remained parked until that moment.

PP-GRACE-004 - Additional Exit Time

Additional time was reasonably required before the vehicle could leave. The operator should consider the verified circumstances together with the applicable Code requirement rather than relying solely on an automated timestamp comparison.

PP-GRACE-005 - Within Applicable Grace

The verified additional period falls within the grace period applicable to this parking event. The charge should therefore be cancelled.

PP-ANPR-001 - Entry/Exit Is Not Automatically Parking Time

ANPR images record the vehicle at particular points on the controlled land. Those timestamps do not necessarily establish the precise period actually parked. Entry, manoeuvring, consideration, payment activity and exit can form part of total presence without being parking time.

PP-ANPR-002 - Duration Disputed

The alleged parking duration is disputed. The operator should establish the actual parking period relied upon rather than merely the elapsed interval between two camera timestamps.

PP-ANPR-003 - Multiple Visits

The vehicle attended the location on more than one separate occasion. The first recorded entry and final recorded exit must not be treated as one continuous parking event without review of the complete sequence.

PP-ANPR-004 - Evidence Vehicle Elsewhere

Independent evidence demonstrates that the vehicle was not continuously present for the period alleged. The operator must reconcile that evidence with its ANPR sequence.

PP-ANPR-005 - Full ANPR Sequence

The operator should review the complete sequence of captures for the vehicle and date, including intermediate entry/exit records, rather than relying only on the two images reproduced on the PCN.

PP-ANPR-007 - Timestamp Discrepancy

A specific discrepancy has been identified in the timestamps relied upon. Because duration depends on those timestamps, the operator should verify the relevant records and explain the discrepancy.

PP-ANPR-008 - Image / VRM Issue

The photographic evidence does not clearly establish the registration details relied upon. The operator should review the original images and confirm the basis on which the VRM was identified.

PP-ANPR-010 - Missing Capture

The sequence appears incomplete. Absence of an intermediate capture should not automatically be treated as proof of continuous presence.

PP-ANPR-011 - Incorrect Pairing

The evidence indicates that separate visits may have been paired into a single event. The operator should establish that the selected entry and exit genuinely relate to one continuous visit.

PP-AUTH-001 - Authorised to Park

The vehicle was authorised to park at the material time. The operator should review the relevant authorisation records and evidence before maintaining an allegation of unauthorised parking.

PP-AUTH-002 - Valid Permit

A valid parking permit existed in connection with the vehicle's use of the location. The existence and scope of that underlying entitlement must be considered.

PP-AUTH-004 - Permit Admin / Display Issue

Although there was an identified display or registration issue, a valid underlying entitlement to park existed. The operator should distinguish this from a case involving no parking authority.

PP-AUTH-006 - Visitor Authorisation

The vehicle was present as an authorised visitor. The operator should review visitor records and the evidence of permission.

PP-AUTH-008 - Genuine Customer

The vehicle's presence was connected with a genuine visit to the premises for which the parking facility was provided. This is not an automatic cancellation ground; it should be used where site terms/policy or landholder authorisation make it relevant.

PP-SIGN-001 - Signage Adequacy

The adequacy of the signage is disputed on the specific factual basis identified. The operator should review the positioning, visibility, content and material-time condition of the signs relied upon.

PP-SIGN-002 - Entrance Sign

The parking terms were not adequately communicated on the route of entry in the circumstances established by the evidence. The operator should identify the entrance signage actually in place at the material time.

PP-SIGN-004 - Relevant Term Prominence

The particular term said to have been breached was not displayed with sufficient prominence or clarity in the circumstances established. The operator should identify precisely where and how that term was communicated.

PP-SIGN-005 - Charge Prominence

The parking charge itself was not displayed with sufficient prominence on the signage relied upon. Use only where the actual sign evidence supports this factual proposition.

PP-SIGN-011 - Conflicting Terms

The signage communicated materially inconsistent terms. The operator should explain which terms it says applied and how they were communicated with sufficient clarity.

PP-LAND-001 - Authority to Operate

The operator is requested to establish that it had sufficient authority from the landowner or other entitled party to operate and enforce the parking scheme at the location on the material date.

PP-LAND-002 - Current Authority

Any authority relied upon should cover the specific location and material date. Evidence for another site or period does not establish authority for this PCN.

PP-LAND-005 - Land / Location Match

The operator must establish that the authority relied upon covers the specific land on which the alleged event occurred.

PP-LAND-006 - Material Date

Any evidence of authority must show that the operator's authority was in force on {{parking_event_date}}.

PP-LAND-008 - Material Redactions

Where authority evidence is supplied but redactions prevent verification of parties, land, period or enforcement scope, the operator should provide sufficient evidence to establish those matters.

PP-END-001 - Cancellation

For the reasons set out above, the parking charge is disputed and the operator is requested to cancel Parking Charge Notice {{pcn_number}}.

PP-END-002 - Reasoned Rejection

If the operator is not prepared to cancel the charge, it is requested to provide a clear response addressing the specific grounds and evidence raised.

PP-END-003 - Independent Appeal

If rejected, please provide the appropriate information/reference required to pursue the applicable independent appeal route.

AI-BREAK-001 - Breakdown / Current Code Route

The vehicle became mechanically immobilised during the relevant period. The incident was outside the ordinary control of the person responsible for the vehicle and materially prevented timely departure/compliance. The operator is requested to apply the breakdown/emergency provisions of the current applicable Code/Appeals Charter to the enclosed evidence and cancel the charge where those provisions are satisfied.

AI-BREAK-002 - Breakdown / Contract Analysis

The alleged breach arose, if at all, only because an unforeseen mechanical event prevented the vehicle from being moved as required. The operator is requested to address the legal effect of that supervening event and the evidence of genuine immobilisation rather than treating the additional presence as a voluntary decision to remain parked.

AI-RES-001 - Residential Primacy

The vehicle was parked pursuant to pre-existing residential parking rights evidenced by the uploaded {{lease_or_tenancy}}. The operator's signage cannot simply be assumed to vary or extinguish rights already granted under that agreement. The operator is requested to address the specific parking clause and explain the contractual basis on which the later parking scheme is said to override or modify it.

AI-RES-002 - Unfettered / Express Right

The relevant agreement grants a right to park in terms that do not contain the restriction now alleged. The operator is requested to address the scope of that grant and identify any valid contractual mechanism said to have introduced the additional restriction. Use only when the uploaded instrument genuinely supports this proposition.

AI-RES-003 - Allocated Bay

The relevant agreement grants or identifies parking rights connected with the allocated space {{bay_reference}}. The operator must address those pre-existing rights before treating the vehicle as an unauthorised user of that space.

AI-RES-004 - Derogation from Grant

The uploaded agreement confers a parking benefit. Where the later parking arrangement substantially interferes with the exercise of that granted right, the operator is requested to address the principle that a grantor cannot substantially deprive the grantee of the benefit already conferred. Use only after legal/factual validation.

AI-EQ-001 - Reasonable Adjustment / Additional Time

The circumstances required additional time connected with a disability-related need. The operator is requested to consider whether its service and enforcement process required a reasonable adjustment rather than determining the charge solely by automated timestamps.

AI-HOSP-001 - Hospital / Clinical Delay

The parking event was connected with verified hospital/medical attendance and the timing issue arose from the identified clinical/emergency circumstances. The operator should apply the site's relevant exemption/validation rules and any applicable Code or Equality Act obligations.

AI-ACT-001 - Loading / Unloading

The vehicle's presence was connected with genuine loading/unloading activity. The operator should assess the actual site terms and the factual distinction between temporary stopping for that activity and ordinary parking, rather than assuming that every stationary period is parking.

AI-EVCH-001 - EV Charging

The vehicle's presence was connected with a genuine charging session. The operator should distinguish the charging terms from any separate parking terms and reconcile the charge-session records with the allegation.

APPENDIX B - AI Ground Selection Matrix

Case pattern	Priority
Breakdown evidence present	BREAKDOWN current-Code route first; frustration/impossibility second if facts support; grace only if separately applicable.
Resident + lease uploaded	Read lease first; residential rights/primacy before permit-display; use derogation only if grant/interference supports it.
Paid + wrong VRM	Payment/keying current-Code route before generic signage.
ANPR + two visits	Multiple-visit/full-sequence route before generic camera maintenance.
Short entry-to-exit + no parking	Consideration/contract formation before grace.
Paid parking ended + short exit delay	Grace/actual parking period; do not call initial consideration time 'grace'.
Keeper + valid PoFA defect	PoFA keeper-liability point can lead; do not add invented defects.
Permit held	Underlying authorisation first; then admin/display issue; residential rights may supersede generic permit logic.
Disability-related extra time	Equality Act/reasonable-adjustment analysis plus applicable Code; avoid generic mitigation wording.
Hospital emergency	Hospital/emergency/Code route; Equality Act only if relevant facts exist.

APPENDIX C - Release Checklist

- PCN number, VRM, operator, location and material dates match source document.
- Driver has not been identified or implied on an unidentified-driver keeper route.
- Every legal ground has an active knowledge module and source status.
- PoFA route/timing/content checks are verified before any defect is stated.
- Applicable Code version and transition status have been resolved.
- Breakdown/emergency route uses actual evidence and does not promise automatic frustration.
- Residential route quotes/paraphrases the actual lease/tenancy accurately and checks regulation/variation clauses.
- ANPR allegations are fact-specific; no generic calibration claim.
- Evidence said to be enclosed actually exists.
- No obsolete pre-estimate-of-loss argument.
- No duplicated grounds or contradictory facts.
- Final letter is concise, coherent and suitable for an initial operator appeal.

PRIVATE PARKING APPEAL AUTOMATION

LEGAL AUTHORITY & SOURCE REGISTER - VERSION 1

Purpose: authoritative legal/source layer for the initial operator appeal generator. This register tells the developer and legal-content administrator what is binding law, what is an industry standard, what is guidance/consultation material, and what must never be presented as binding law.

1. Authority Hierarchy

Level	Treatment by system
Primary legislation	Binding law. Use exact current legislation and jurisdictional scope.
Binding appellate case law	May be relied on for the legal proposition actually decided; fact-sensitive application required.
Lower-court / persuasive authority	Do not present as binding. Use only when administrator has verified the transcript and enabled the authority.
Industry Code	Contractual/accreditation standard for participating operators, not an Act of Parliament. Apply correct version/transition.
Government consultation / withdrawn Code	Context and policy evidence only unless a current rule expressly adopts it. Never label withdrawn/proposed material as current statutory law.
CMA guidance / enforcement material	Consumer-law guidance and regulatory context. Distinguish guidance, open investigations and actual findings.

2. Core Legislation

Authority	Core use in knowledge base	Implementation note
Protection of Freedoms Act 2012, s56 & Schedule 4	Recovery of unpaid parking charges from vehicle keeper/hirer in England and Wales where statutory conditions are met.	Route-specific checks for Notice to Driver/Notice to Keeper, relevant land, timing, prescribed information and keeper/hirer conditions. Failure affects keeper liability; it does not automatically erase any driver liability.
Consumer Rights Act 2015	Fairness and transparency of consumer contract terms/notices.	Use only where the term, notice or charge raises a genuine fairness/transparency issue. Do not use as generic boilerplate.
Equality Act 2010, including ss20/29 and Schedule 2	Reasonable adjustments in services and disability-related disadvantage.	Apply only when facts engage the Act. Do not require unnecessary medical disclosure; Blue Badge status is not the statutory test.
Parking (Code of Practice) Act 2019	Statutory framework requiring a government private parking Code and appeals arrangements.	Important framework law, but do not confuse it with the current industry Single Code.
Digital Markets, Competition and Consumers Act 2024 / current consumer protection regime	Consumer protection enforcement context, including CMA direct enforcement powers.	Developer should not generate technical DMCC claims unless a verified knowledge module is enabled.

<https://www.legislation.gov.uk/ukpga/2012/9/schedule/4>

<https://www.legislation.gov.uk/ukpga/2015/15/contents>

<https://www.legislation.gov.uk/ukpga/2010/15/contents>

<https://www.legislation.gov.uk/ukpga/2019/8/contents>

3. Protection of Freedoms Act 2012 - Developer Checklist

The application must not use a generic 'non-compliant with PoFA' paragraph. It must first classify the statutory route and test only the requirements relevant to that route.

Check group	System requirement
Jurisdiction / relevant land	Confirm Schedule 4 is capable of applying to the land/event. Flag byelaw or other excluded/non-relevant land for review.
Notice route	POSTAL without prior Notice to Driver; WINDSCREEN/Notice to Driver followed by NTK; hire/lease vehicle route; unresolved.
Timing	Calculate the applicable statutory notice/delivery window from source dates. Do not infer receipt dates where not known.
Parking period	Check whether the notice specifies the required parking period rather than relying only on camera entry/exit timestamps.
Creditor / amount / circumstances	Check the route-specific prescribed information actually required by Schedule 4.
Keeper warning / invitation	Check exact route-specific statutory wording requirements in substance before alleging a defect.
Driver status	Where driver has not been formally identified and a valid Schedule 4 failure exists, keeper liability cannot be transferred under Schedule 4.
Hire vehicles	Do not treat a hire/company case as an ordinary keeper case. Create a dedicated route before production use.

Important drafting rule: the safe conclusion is normally that the operator has not established a right to recover the charge from the keeper under Schedule 4. Do not automatically state that the parking charge itself is void.

4. Current Industry Code

As at September 2026, the BPA states that the private parking sector Single Code of Practice is current version 1.1, published 13 April 2026, with version 1.1 having effect from 17 February 2025. The BPA also publishes transition information and earlier versions for earlier events.

Date/event	Version handling
Issues before 1 February 2024	Check the earlier applicable ATA Code rather than applying the Single Code retrospectively.
1 February 2024 to before 1 October 2024	BPA states its Version 9 applies to BPA non-compliance issues in that period.
1 October 2024 to before 17 February 2025	Single Code Version 1 applies, subject to transition provisions.
17 February 2025 onward	Single Code Version 1.1 applies, subject to transition provisions and later updates.
13 April 2026 publication update	BPA records publication/foreword update concerning

Official BPA page: <https://www.britishparking.co.uk/Code-of-Practice-and-Compliance-Monitoring/Parking-News-Online>

Current sector Code PDF: <https://www.britishparking.co.uk/write/Documents/AOS/Sector%20Code%20Templates/sectorsingleCodeofPracticeVersion1.1130225.pdf>

Developer requirement: store Code provisions as versioned records with effective_from, effective_to, transition_status, operator/ATA applicability and source URL. Never hard-code a grace/consideration/keying rule without that metadata.

5. Government Statutory Code Status

The government Code must not be described by the AI as already in force unless the source register is updated after formal publication/commencement. The 2025 MHCLG consultation was a consultation before preparing a new government Code. The government consultation page remains the authoritative status source for this project.

<https://www.gov.uk/government/consultations/private-parking-code-of-practice>

The withdrawn February 2022 government Code may be useful historical/policy context but must be tagged WITHDRAWN and must not be cited as current binding requirements.

6. Consumer Contract Law / ParkingEye v Beavis

ParkingEye Ltd v Beavis [2015] UKSC 67 is the leading Supreme Court authority on a private parking charge in its particular factual setting. It means the generator must not use the old generic 'the charge is an unenforceable penalty because it is not a genuine pre-estimate of loss' argument. The decision does not make every parking charge enforceable regardless of signage, authority, contract formation, statutory keeper liability or the facts.

AI may use	AI must not say
Beavis confirms a parking charge can be commercially justified and enforceable in an appropriate consumer parking scheme.	Every £100 private parking charge is automatically valid.
The prominence of the charge/signage and the legitimate interest in the scheme were important to the Supreme Court's analysis.	Beavis eliminates all signage/fairness/contract arguments.
Fact-specific distinctions may matter.	The charge must equal the operator's financial loss.

Official Supreme Court case page: <https://www.supremecourt.uk/cases/ukSC-2015-0116>

7. Residential Rights / Primacy / Derogation from Grant

The primary evidence in a residential case is the actual lease, tenancy, parking grant, title/plan and any valid regulations. The AI must analyse those documents before using labels such as 'primacy of contract' or 'unfettered right'.

Authority / principle	Permitted use
Saeed v Plustrade Ltd [2001] EWCA Civ 2011	Court of Appeal authority demonstrating that an express parking right can be protected against substantial interference and applying the principle that a grantor must not derogate from its grant. Use only where the appellant's actual instrument grants a

	relevant parking right.
Derogation from grant	Where a landlord/grantor has conferred a benefit, later conduct cannot substantially deprive the grantee of that benefit. Application depends on the actual grant and degree of interference.
Quiet enjoyment	Potentially relevant where the lease/tenancy and facts support substantial interference, but not a universal immunity from parking regulation.
Jopson v Homeguard Services Ltd, B9GF0A9E (Oxford County Court appeal, 2016)	Potential persuasive authority concerning the distinction between parking and brief stopping/loading in a residential context. Do not present as binding Court of Appeal authority; use only if verified transcript is stored/enabled.

Saeed judgment: <https://www.bailii.org/ew/cases/EWCA/Civ/2001/2011.html>

8. Breakdown / Emergency / Frustration

Breakdown should have two separate knowledge routes: (A) current Code/Appeals Charter treatment of evidenced emergencies/breakdown where applicable; and (B) contract-law frustration/impossibility analysis where the facts genuinely show a supervening event prevented performance. The system must not equate every mechanical issue with automatic frustration.

Route	AI test
Appeals Charter / Code	Is evidenced breakdown/emergency a cancellation/exemption category under the applicable current industry Code for this event/operator? If yes, this may be the strongest and simplest initial-appeal route.
Contract frustration/impossibility	Was there an unforeseen event outside control, occurring after any contract was formed, which made the relevant obligation impossible or radically different? Apply cautiously and fact-specifically.
Not parking / temporary vicissitude	Where the issue is brief stopping for a puncture, loading or similar, a separately verified persuasive authority may assist; do not collapse this into frustration.

The CMA's July 2026 consumer material states that a charge should be cancelled where evidence shows an applicable exemption, giving an emergency outside the motorist's control as an example, and refers to the existing industry's Appeals Charter.

CMA: <https://www.gov.uk/government/news/parking-charges-cma-takes-action-to-drive-improvements-for-motorists>

9. CMA 2026 Consumer-Law Developments

On 16 July 2026 the CMA announced sector action, recommendations to government and an investigation into Euro Car Parks. The investigation is open; no infringement finding should be inferred from the fact of investigation.

Source	System use
CMA letter to government - 16 July 2026	Regulatory recommendations/context; not itself a court judgment.
CMA private parking press release - 16 July 2026	Current consumer-facing statements on appeals, emergencies and keying errors; useful for policy/context.

Euro Car Parks consumer protection investigation	Open investigation only. Never say ECP has been found to breach consumer law unless/until an official finding says so.
Updated CMA37 unfair contract terms guidance - 22 July 2026	Current CMA guidance on fairness/transparency under the Consumer Rights Act 2015.

10. Equality Act 2010

Question	Required approach
Is a disabled person placed at a substantial disadvantage by a provision/practice or physical feature?	If supported, assess the reasonable-adjustment duty; do not assume a badge is required to trigger the Act.
Was extra time needed because of disability-related circumstances?	Consider additional time as a possible reasonable adjustment and avoid relying solely on automated timestamps.
What evidence is necessary?	Request only information needed to establish the functional issue; do not demand excessive medical detail.
Can the AI promise cancellation?	No. State the relevant duty/adjustment issue and require proper consideration; outcome depends on facts and law.

Official legislation: <https://www.legislation.gov.uk/ukpga/2010/15/contents>

11. Signage / Fairness / Transparency

The generator should analyse contract formation and transparency from the actual signage evidence. Beavis makes prominence important; the Consumer Rights Act 2015 and CMA37 provide the wider consumer-term fairness/transparency framework. The AI must not claim a sign is inadequate merely because the customer says they did not personally read it.

Evidence question	AI analysis
Entrance	Was notice of controlled parking reasonably visible on the route used?
Relevant term	Was the exact restriction allegedly breached sufficiently prominent/clear?
Charge	Was the parking charge itself sufficiently prominent in context?
Lighting/condition	Did material-time conditions affect legibility?
Conflicts	Did different signs materially conflict?
Contemporaneous proof	Are operator photos actually from/materially representative of the event date?

12. ANPR / Camera Evidence

ANPR evidence is evidence of a vehicle at camera points. The AI should not automatically equate the interval between first entry and final exit with the contractual 'period of parking'. Use consideration, manoeuvring, queueing, multiple visits and actual parking facts where supported.

Allowed challenge	Prohibited generic challenge
Specific missing capture / double visit supported by facts.	'ANPR is unreliable' with no factual basis.
Specific timestamp or VRM discrepancy visible in evidence.	Demanding calibration records in every appeal regardless of issue.
Independent evidence showing vehicle elsewhere.	Inventing camera faults.
Requesting full sequence where multiple visits are credibly alleged.	Claiming every ANPR PCN fails PoFA because timestamps are not parking time.

13. Payment / Keying / Machine Failure

The current industry Appeals Charter and CMA 2026 materials make payment/keying issues particularly important. The system should first establish whether tariff was actually paid, what registration was entered, whether the payment can be matched and what current Code outcome applies.

Do not hard-code an outcome from older withdrawn government proposals. The applicable current industry Code record must control the result.

14. Landowner Authority

At initial operator appeal, landowner authority should normally be a concise proof/scope issue, not an unsupported assertion that the operator has no contract. Stronger use is justified where the evidence shows a location mismatch, expired authority, material redactions, lack of chain of authority or a residential grant inconsistent with the operator's asserted rights.

15. Jurisdiction and Exclusions

Issue	Rule
Scotland	PoFA Schedule 4 keeper-liability route is not to be applied as though England/Wales law automatically governs. Separate jurisdiction logic is required.
Byelaw land / statutory regimes	Flag for specialist route; do not assume Schedule 4 relevant land or ordinary contract analysis.
Council/local-authority PCNs	Out of scope. Do not use private parking knowledge base.
Debt recovery / Letter of Claim / County Court	Out of scope for this initial operator appeal build.
Hire/company vehicles	Require dedicated statutory/contract route before full automation.

16. Source Status Flags for Database

Status	Meaning
BINDING_LEGISLATION	Current statute/regulation.
BINDING_APPELLATE_CASE	Binding authority for the proposition stored.
PERSUASIVE_CASE	Lower court / persuasive only.
INDUSTRY_CODE_CURRENT	Current ATA/sector standard.
INDUSTRY_CODE_HISTORIC	Historic version used only for matching event dates.
GOVERNMENT_PROPOSAL	Consultation/proposal; never presented as current law.

WITHDRAWN	Withdrawn source; historical/context only.
REGULATOR_GUIDANCE	CMA/government guidance, not legislation.
OPEN_INVESTIGATION	No finding of breach.

17. Mandatory Legal QA

- Every generated legal proposition must have a source_id in the internal audit record.
- Every source_id must carry jurisdiction, authority level, effective dates and status.
- Case law quotations are disabled by default; paraphrase verified propositions unless an administrator has approved a short quotation.
- Any source marked WITHDRAWN, GOVERNMENT_PROPOSAL or OPEN_INVESTIGATION must be blocked from wording that describes it as binding/current law.
- PoFA failures must be computed from the actual notice route and dates.
- Residential rights must be derived from the uploaded instrument, not from resident status alone.
- Breakdown must first be checked against the current Code/Appeals Charter; frustration is a separate fact-sensitive legal route.
- Before launch and after any Code/legal update, run regression tests against representative keeper, payment, ANPR, residential, breakdown, Equality Act and signage cases.
